Telescopic combination ladder 2.30 m

Material no.: 801012159 | Matchcode: ZTCL23 | EAN code: 4045294145088

Description

The telescopic combination ladder is made of anodised tubes and glass fibre reinforced hard plastic elements. Rubber feet provide for maximum grip on the ground. Due to its compact dimensions the ladder is easy to transport, perfectly suited for confined spaces and even fits into the boot of a car. There is a holder available for the telescopic ladder which provides for simple fastening onto the van racking system or rear door. The telescopic combination ladder is small in transport but comes out big in operation. The ladder, with 7 rungs, can be fully extended to a length of 2.30 m. As a result you can reach a maximum work height of 3.1 m with a load capacity of up to 150 kg. When retracted, it has a compact length of just 0.73 m.
