Description

The LED strip support is ideal for the optimum attachment of LED strips, at the same time as using a fixing rail for restraint poles. The support rail is mounted between the restraint pole fixing rail and the roof beam. It is fixed in place using the mounting material for the fixing rail. The hole pattern is already punched in the support rail. One 1-metre long LED strip can be fitted on each side of the rail. The edge of the support rail protects the LED strips from damage, at the same time preventing a direct view into the LED light, reducing unpleasant glare.
