Description

The intermediate floor provides for even more order and the maximum exploitation of the case volume. It enables the sub-division of the case into two levels which can both be equipped with inset boxes. This intermediate floor is suitable for the KM 330 metal case and covers completely the interior surface of the case. It provides the perfect base for equipping with inset boxes height 31mm. In the lower segment inset boxes height 63 mm can be accommodated and serve simultaneously as an support area for the intermediate floor. The removal of the intermediate floor as well as individual inset boxes from the case is possible at any time so that you can have these directly to hand on-site. The pictured inset boxes are not contained in the scope of delivery.
