Description

The ProSafe lashing belt with a length of 0.93 m is specially for the securing of gas bottles and is also designed for the securing of goods on the Sortimo TopSystem ProSafe version. The belt is hooked-in to the individual lashing points or into the ProSafe lashing rails.

Can still be deployed universally in the vehicle. The ratchet enables a higher clamping force to be achieved as would be possible with the a clamp buckle. This means you can secure heavy objects professionally. The anti-slip mat which can be cut to size (Ref. No.: 6000003365) additionally prevents the shifting of payloads. When it comes to payloads with sharp edges, an edge protection profile should be used to protect the lashing belt and the load.

Note: The authorities require vehicle ventilation with free openings when transporting gas bottles. For this purpose we provide a ventilation system in our original accessories programme, which can be used for both ventilation and extraction purposes.
